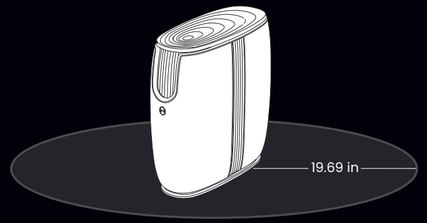
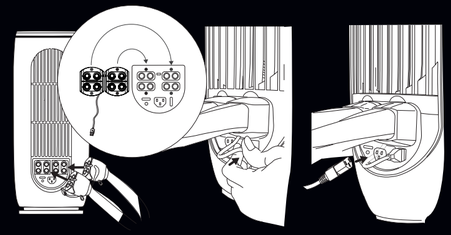
Step 1

Strip your bed and lay the Adapt Layer flat on your mattress, with the tubing connectors at the head of the bed. Fit the Layer to the mattress as you would a fitted sheet, starting at the four corners.



Step 2

Place the Adapt Hub upright on the floor beside the bed, near the head of the bed. Leave more than 19.69 in (50 cm) of clearance around the Hub for ventilation.

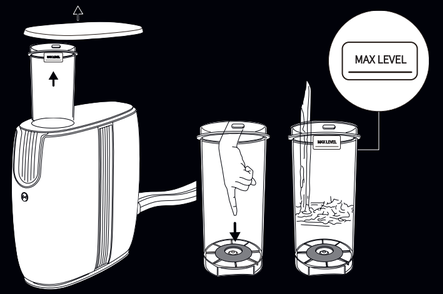


Step 3

Connect both water tubes from the Layer to the Hub, matching the colored dots. Then connect the UsB cable. Connect the power cord to the Hub and then plug it into a wall socket. Make sure all connections are secure and that the tubing and cables hang naturally without being folded or pinched.

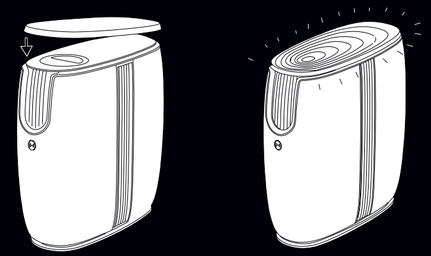
Step 4

Download the OVAL HOME app, then create an account or sign in. Follow the on-screen instructions to complete Bluetooth pairing and Wi-Fi setup. Once connected, the Adapt Hub indicator light will turn solid orange.



Step 5

Remove the water tank from the Hub and the discard desiccant packet. Place a water filter in the bottom of the tank - it snaps in magnetically. Fill the tank with distilled or purified water up to the "MAX LEVEL" mark.



Step 6

After reinstalling the water tank, the indicator light will flash white while the system fills with water. If the light turns solid orange, remove the tank, refill it to the "MAX LEVEL" mark, and reinstall it. Initial setup typically requires 2-3 tankfills and takes approximately 3-5 minutes. When the indicator light turns solid white, your Adapt System is ready to use.
